☐ This opinion has been established on the basis of a translation from the original language into the following language , which is the language of a translation furnished for the purposes of: international search (under Rules 12.3 and 23.1(b))

2. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of :

a. type of material

- ☐ a sequence listing  
☐ table(s) related to the sequence listing

b. format of material

- ☐ in written format  
☐ in computer readable form

c. time of filing/furnishing

- ☐ contained in the international application as filed.  
☐ filed together with the international application in computer readable form.  
☐ furnished subsequently to this Authority for the purposes of search.

3. ☐ in addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

4. Additional comments:

**WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITY**

International application No.  
PCT/CN2004/001409

**Box No. V** Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

**1. Statement:**

Novelty (N)	Claims 1-13	YES
	Claims	NO
Inventive step (IS)	Claims 2,3,5,6,10-13	YES
	Claims 1,4,7-9	NO
Industrial applicability (IA)	Claims 1-13	YES
	Claims	NO

**2. Citations and explanations**

The claims 1,4,7-9 are objected under the PCT Rule 66.2(ii).

Document 1 refers to an optical driver and a method for distinguishing disc type inserted in this driver. It discloses to take the frequency of the wobble signal in DVD, and make them through two branches of the BPFs that the centre frequency of one is 140KHz, the other's is 810KHz, respectively, and then, through a PLL or a level detection circuit respectively, and judging the DVD is DVD-ROM, DVD-RW or DVD+RW depending on this result.

Document 1 does not describes that determining the DVD's type according to the frequency of wobble signal directly, and only describes that it's judging the DVD's type depending on which BPF's output is stronger, and at the same time, the signal strength must beyond a certain value. But this difference does not make a inventive step for the skill in the art. So, the claims 1 and 7 lack of inventive step.

Claims 4,8 and 9 further limit the method about how to calculate the frequency of the wobble signal, but obviously, whenever using 1 circle, 2 circle, the inner circle, it is ease to take the frequency of the wobble signal. So, the dependent claims 4,8 and 9 which are dependent on the independent claims 1 and 7 respectively are lack of inventive step.
